REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: ***

The prior art of record fails to teach and/or suggest a fuel cell electricity generator of the solid oxide type fuel cell element having a cathode and an anode on opposing faces of the solid electrolyte layer, wherein means for supplying both a flame and an oxygen gas are disposed on the anode and cathode sides respectively, in such a manner that the anode side is disposed in the flame or in a position close to the flame and the cathode is exposed to the oxygen containing gas, and wherein the electrolyte has a porosity of not less than 10%. The prior art solid oxide fuel cells typically have a solid electrolyte which is dense with little or no porosity, however, applicants have discovered that when using a flame on the anode side with the traditional solid electrolyte, that cracks in the solid electrolyte occur, but when using a solid electrolyte with a porosity of 10% or greater, that the cracks do not occur and therefore the fuel cell electricity generator is able to function with out failure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
